

February GRIN
Meeting

Desktop Metal Is Set to Change How Metal Is Manufactured with the Fastest Metal 3D Printing System in the World

For the First Time, Affordable, Safe and Precise Metal 3D Printing for Both Prototyping and Mass Production Will Be a Reality Across Industries - at Speeds 100x Faster.

Desktop Metal, the company committed to making metal 3D printing accessible to global manufacturers and engineers, launched two systems covering the full product lifecycle -- from prototyping to mass production -- which mark a fundamental shift in how products will be developed and brought to market. The DM Studio and DM Production systems change the rules of traditional metal manufacturing solutions with the advent of first-of-its-kind innovative approaches that reduce costs and significantly increase speed, safety, and print quality.

Tim Ruffner is the Commercial Sales Channel Manager for Desktop Metal and will share his 10+ years experience in prototyping & manufacturing.
